

**The Right Selection Has
Never Been Easier**

Choose The Right Valves, Dampers And Actuators — Easily — With The Honeywell Product Selection Tool

Honeywell's Product Selection Tool is designed to streamline the sizing and estimating of valves, dampers and actuators. Available 24/7 at customer.honeywell.com, the Product Selection Tool has the most up-to-date Honeywell product information for valves, actuators and dampers right when you need it. Best of all, the tool includes a Cv Calculator to ensure you get the correct valves for your application and a Torque Calculator to guide you to the right actuators for your dampers.

Simply put, you'll never need to question your product combinations again.

- **Fewer Error Possibilities** — When you select a valve prior to entering the actuator tool, all incompatible actuators will be automatically deselected, reducing the possibility for errors. The damper selection tool also simplifies the selection of commercial dampers.
- **Quote Tracking** — Sizing and estimating capabilities are enhanced by allowing for quote generation. Your selections will be added to a quote list, and once complete, one click will transform your selections into a schedule that is exportable and can be manipulated to meet your needs. Your unique quote identity will be saved for 365 days to accommodate any job's timeline and associated actuators.
- **Easy To Use** — There's no need for extensive training to use the Product Selection Tool. Just follow the drop-down menus to find exactly what's needed to meet your specific requirements. With every selection, you're one step closer to getting it right.
- **Extended Online Ordering** — For the first time, dampers can be ordered online. Take advantage of ordering dampers online today.

Start Today — Just go to customer.honeywell.com and select the Products tab on the menu bar.

Quick User's Guide

Just follow these quick steps to put the Honeywell Product Selection Tool to work for you.

1. Locate The Honeywell Product Selection Tool

The Honeywell Product Selection Tool can be found in the Products tab on the top of any page or from within a product page on the secondary drop down menu bar.

2. Choose The Right Tool

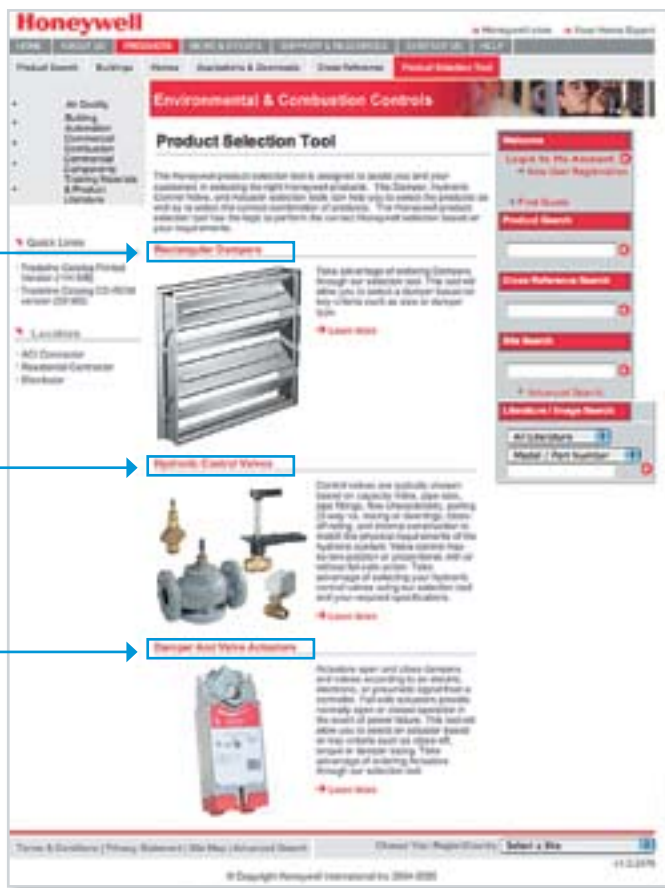

Rectangular Damper Selection Tool

Select a damper based on key criteria such as size or damper type.

Hydronic Control Valve Selection Tool

Control valves are typically chosen based on capacity index, pipe size, pipe fittings, flow characteristic, porting (2-way vs. mixing or diverting), close-off rating and internal construction to match the physical requirements of the hydronic system. Valve control may be two-position or proportional, with or without failsafe action.

Use the selection tool to identify a valve/actuator combination to meet your required specifications.

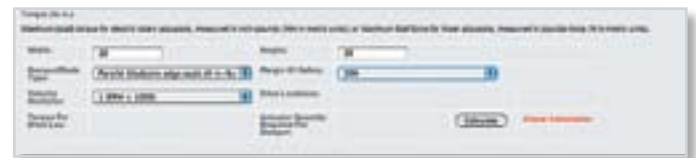

Damper And Valve Actuator Selection Tool

Actuators open and close dampers and valves according to an electric, electronic, or pneumatic signal from a controller. Failsafe actuators provide normally open or closed operation in the event of power failure. Use the tool to select an actuator based on key criteria such as close-off, torque or damper sizing.

3. Put The Selection Tool To Work

Just use the menus and fill in the spaces needed for your specifications. With each step, you're closer to the exact selection you need. No guesswork. No errors.

- The valve, actuator and damper selection tool data is compiled from specific selection criteria that will provide you with a list of the Honeywell products that specifically meet your criteria.
- If you're not sure how to calculate the Cv of a valve or the torque of a damper actuator, an easy-to-use calculator will guide you through it.
- No need to guess on your valve and actuator or damper and actuator combinations. Simply select a valve or damper and you will be prompted with the question, "Would you like an actuator?" By selecting "Yes", the tool automatically selects the Honeywell actuator(s) that meet your application requirements.

Quote Creation And Lookup

Products are added to the quote list for each selection made. You may choose to create a quote when your product selections are complete. The resulting quote will generate a unique ID that will enable you to:

- Export the quote into a comma delimited or Excel™ file that will capture all of the selections you previously made, including any tagging information. The file can become a quote or a schedule depending on your needs.
- Store the quote for up to 365 days. Once a quote is stored, it can be located by using the “Find Quote” icon on customer.honeywell.com. Once a quote is located it will update with the most up-to-date availability and pricing. If a contractor creates a schedule using the product selection tool, they can bring the quote ID to the distributor and the distributor can locate the contractor’s quote using the quote locator function.
- Specification Take-Off Service Integration — when you use the Specification Take-Off Service, you will receive a Quote ID from the Product Selection Tool. You will now be able to log on to the Product Selection Tool to retrieve your quote.

Visit customer.honeywell.com and use the Product Selection Tool today.
